

Dual LDO Regulator with ON/OFF Switch

■ GENERAL DESCRIPTION

The XC6415 series is a highly accurate, CMOS Dual LDO voltage regulator. Performance features include low output noise, high ripple rejection rate, and low dropout. Extremely dense power supply circuit can be organized with a 2 channeled high speed voltage regulator in low ON resistance which is built-in to an ultra small USP-6C package.

The output voltage for each regulator is set independently by laser trimming and selectable in 0.05V increments within a range of 0.8 to 5.0V. The EN function allows the output of each regulator to be turned off independently. In this state, the electric charge at the output capacitor (C_L) will be discharged via the internal auto-discharge switch, and as a result the V_{OUT} pin quickly returns to the V_{SS} level.

The output stabilization capacitor (C_L) is also compatible with low ESR ceramic capacitors. The high level of output stability is maintained even during frequent load fluctuations, due to the excellent transient response performance. Because regulator 1 and 2 are completely isolated, a cross talk between each channel, which causes a problem during load fluctuations, can be greatly reduced.

■ APPLICATIONS

- Smart phones / Mobile phones
- Portable game consoles
- Digital still cameras / camcorders
- Digital audio equipment
- Mobile devices / terminals

■ FEATURES

Output Current	: 200mA (300mA limit, TYP.)
Dropout Voltage	: 95mV @ $I_{OUT}=100mA$ $V_{OUT}=3.0V$
Operating Voltage Range	: 1.5V ~ 6.0V
Output Voltage Range	: 0.8V ~ 5.0V (0.05V increments)
High Accuracy	: $\pm 1\%$ @ $V_{OUT}>2.0V$ $\pm 2\%$ @ $V_{OUT}\geq 1.5V$ $\pm 20mV$ @ $V_{OUT}\leq 2.0V$ $\pm 30mV$ @ $V_{OUT}< 1.5V$
Low Power Consumption	: 28 μA /ch (TYP.)
Stand-by Current	: Less than 0.1 μA
Ripple Rejection	: 65dB@1kHz
Operating Ambient Temperature	: -40°C ~ 85°C
Low ESR Capacitor	: 1.0 μF ceramic capacitors
Packages	: USP-6C, SOT-26, USPN-6
Environmentally Friendly	: EU RoHS Compliant, Pb Free

PIN CONFIGURATION

SOT-26
(TOP VIEW)

USP-6C*
(BOTTOM VIEW)

USPN-6
(BOTTOM VIEW)

*The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the V_{SS} (No. 4) pin.

PIN ASSIGNMENT

NOTE:

(*)1 Unless otherwise stated, V_{IN}=V_{OUT(T)}+1.0V.

(*)2 V_{OUT(E)}= Effective output voltage (see the voltage chart)

(ie. The output voltage when "V_{OUT(T)}+1.0V" is provided at the V_{IN} pin while maintaining a certain I_{OUT} value.

(*)3 Characteristics of the actual V_{OUT(E)} by setting output voltage is shown in the voltage chart.

(*)4 V_{OUT(T)}: Nominal output voltage

(*)5 V_{dif}={V_{IN1}^{(*)7} - V_{OUT1}^{(*)6}}

(*)6 V_{OUT1}: A voltage equal to 98% of the output voltage whenever an amply stabilized I_{OUT}{V_{OUT(T)}+1.0V} is input.

(*)7 V_{IN1}: The input voltage when V_{OUT1} appears as input voltage is gradually decreased.

(*)8 For XC6415B, D, F, H series only.

XC6415A, C, E, G series discharge with only Rx1 and Rx2 resistors as shown in the BLOCK DIAGRAMS.

(*)9 Each channel is measured when the other channel is turned off (V_{EN}=V_{SS}).

(*)10 XC6415E, F, G, H type only. (Including the current flowing through the pull down resistor.)

● Circuit ③

OPERATIONAL DESCRIPTION

<Output Voltage Control>

The voltage divided by resistors Rx1 and Rx2 is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET which is connected to the V_{OUT} pin is then driven by the subsequent output signal. The output voltage at the V_{OUT} pin is controlled and stabilized by a system of negative feedback. The current limit circuit and short protect circuit operate in relation to the level of output current. Further, the IC's internal circuitry can be shutdown via the EN pin's signal.

< XC6415BB Series >

<C_L Auto-Discharge Function>

XC6415B, D, F, H series can quickly discharge the electric charge at the output capacitor (C_L), when a low signal to the EN pin, which enables a whole IC circuit put into OFF state, is inputted via the N-channel transistor located between the V_{OUT} pin and the V_{SS} pin (cf. BLOCK DIAGRAM). The C_L discharge resistance is set to 550Ω when V_{IN} is 6.0V (TYP.) and V_{OUT} is 4.0V (TYP.). Moreover, discharge time of the output capacitor (C_L) is set by the C_L auto-discharge resistance (R) and the output capacitor (C_L). By setting time constant of a C_L auto-discharge resistance value [R] and an output capacitor value (C_L) as τ(τ=C x R), the output voltage after discharge via the N channel transistor is calculated by the following formulas.

$$V = V_{OUT} \times e^{-t/\tau}, \quad \text{or } t = \tau \ln(V_{OUT(E)} / V)$$

(V : Output voltage after discharge, V_{OUT(E)} : Output voltage, t: Discharge time,
τ : C_L auto-discharge resistance R × Output capacitor (C_L) value C)

C_L high-speed discharge function can be set by each regulator.

<Current Limiter, Short-Circuit Protection>

The XC6415 series includes a fold-back circuit, which aid the operations of the current limiter and circuit protection. When the load current reaches the current limit level, the fold-back circuit operates and output voltage drops. As a result of this drop in output voltage, output current also decreases. When the output pin is shorted, a current of about 20mA flows.

<EN Pin>

The IC's internal circuitry can be shutdown via the signal from the EN pin with the XC6415 series. In shutdown mode, output at the V_{OUT} pin will be pulled down to the V_{SS} level via Rx1 & Rx2. However, as for the XC6415B, D, F, H series, the C_L auto-discharge resistor is connected in parallel to Rx1 and Rx2 while the power supply is applied to the V_{IN} pin. Therefore, time until the V_{OUT} pin reaches the V_{SS} level becomes short. The EN pin is CMOS input, but in case the EN pin with pulled down resistor, the EN input current will be increase when the IC operates. Also, in case of the EN pin without pulled down resistor, the output voltage becomes unstable when the EN pin is left open. If this IC is used with the correct output voltage for the EN pin, the logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry when medium voltage is input.

NOTES ON USE

1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please wire the input capacitor (C_{IN}) and the output capacitor (C_L) as close to the IC as possible.
3. Torex places an importance on improving our products and its reliability.
However, by any possibility, we would equest user fail-safe design and post-aging treatment on system or equipment.

TYPICAL PERFORMANCE CHARACTERISTICS

* EN Voltage condition: Unless otherwise stated, $V_{EN}=V_{IN}$

(1) OutputVoltage vs. OutputCurrent

XC6415($V_{OUT}=0.8V$)

XC6415($V_{OUT}=0.8V$)

XC6415($V_{OUT}=1.5V$)

XC6415($V_{OUT}=1.5V$)

XC6415($V_{OUT}=2.8V$)

XC6415($V_{OUT}=2.8V$)

PACKAGE	OUTLINE / LAND PATTERN	THERMAL CHARACTERISTICS	
SOT-26	SOT-26 PKG	Standard Board	SOT-26 Power Dissipation
USP-6C	USP-6C PKG	Standard Board	USP-6C Power Dissipation
		JESD51-7 Board	
USPN-6	USPN-6 PKG	Standard Board	USPN-6 Power Dissipation

MARKING RULE

●SOT-26, USP-6C

SOT-26

USP-6C

USP-6C(Under dot)

① represents product series

MARK	PRODUCT SERIES
1	XC6415xxxxx
6	

* USP-6C of MARK 6 only Under dot specification.

②③ represents internal sequential number

01~09, 10~99, A0~A9, B0~, B9~, Z9~repeated.
(G, I, J, O, Q, W excluded)

④⑤ represents production lot number

01~09, 10, 11~99, 0A~0Z, 1A~9Z, A0~Z9, AA~ZZ repeated.
(G, I, J, O, Q, W excluded)

*No character inversion used.

●USPN-6

USPN-6

① represents product series

MARK	PRODUCT SERIES
1	XC6415xxxxx
2	
3	

* Mark registered loop.(10xx~1Zxx,20xx~2Zxx,30xx~3Zxx)

② represents internal sequential number

0, 1~9, A, B~Z repeated.
(G, I, J, O, Q, W excluded)

*Once the sequential number of the mark② is used to Z, a mark① symbol will be added.

③ ④ represents production lot number

01~09, 10, 11~99, 0A~0Z, 1A~9Z, A0~Z9, AA~ZZ repeated.
(G, I, J, O, Q, W excluded)

*No character inversion used.

1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.
3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.
4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.
5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.
6. Our products are not designed to be Radiation-resistant.
7. Please use the product listed in this datasheet within the specified ranges.
8. We assume no responsibility for damage or loss due to abnormal use.
9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.
